Advances in Non-volatile Memory and Storage Technology (Woodhead Publishing Series in Electronic and Optical Materials)

Advances in Non-volatile Memory and Storage Technology (Woodhead Publishing Series in Electronic and Optical Materials)

New solutions are needed for future scaling down of nonvolatile memory. *Advances in Non-volatile Memory and Storage Technology* provides an overview of developing technologies and explores their strengths and weaknesses.

After an overview of the current market, part one introduces improvements in flash technologies, including developments in 3D NAND flash technologies and flash memory for ultra-high density storage devices. Part two looks at the advantages of designing phase change memory and resistive random access memory technologies. It looks in particular at the fabrication, properties, and performance of nanowire phase change memory technologies. Later chapters also consider modeling of both metal oxide and resistive random access memory switching mechanisms, as well as conductive bridge random access memory technologies. Finally, part three looks to the future of alternative technologies. The areas covered include molecular, polymer, and hybrid organic memory devices, and a variety of random access memory devices such as nano-electromechanical, ferroelectric, and spin-transfer-torque magnetoresistive devices.

Advances in Non-volatile Memory and Storage Technology is a key resource for postgraduate students and academic researchers in physics, materials science, and electrical engineering. It is a valuable tool for research and development managers concerned with electronics, semiconductors, nanotechnology, solid-state memories, magnetic materials, organic materials, and portable electronic devices.

- Provides an overview of developing nonvolatile memory and storage technologies and explores their strengths and weaknesses
- Examines improvements to flash technology, charge trapping, and resistive random access memory
- Discusses emerging devices such as those based on polymer and molecular electronics, and nanoelectromechanical random access memory (RAM)

From reader reviews:

Phyllis Kelly:

Here thing why this particular Advances in Non-volatile Memory and Storage Technology (Woodhead Publishing Series in Electronic and Optical Materials) are different and reliable to be yours. First of all reading a book is good but it really depends in the content of it which is the content is as yummy as food or not. Advances in Non-volatile Memory and Storage Technology (Woodhead Publishing Series in Electronic and Optical Materials) giving you information deeper and different ways, you can find any guide out there but there is no publication that similar with Advances in Non-volatile Memory and Storage Technology (Woodhead Publishing Series in Electronic and Optical Materials). It gives you thrill reading journey, its open up your own eyes about the thing this happened in the world which is perhaps can be happened around you. You can easily bring everywhere like in park, café, or even in your means home by train. In case you are having difficulties in bringing the printed book maybe the form of Advances in Non-volatile Memory and Storage Technology (Woodhead Publishing Series in Electronic and Optical Materials) in e-book can be your option.

April Wages:

Do you one of the book lovers? If yes, do you ever feeling doubt if you find yourself in the book store? Try and pick one book that you never know the inside because don't determine book by its cover may doesn't work this is difficult job because you are frightened that the inside maybe not since fantastic as in the outside look likes. Maybe you answer can be Advances in Non-volatile Memory and Storage Technology (Woodhead Publishing Series in Electronic and Optical Materials) why because the amazing cover that make you consider about the content will not disappoint anyone. The inside or content is usually fantastic as the outside as well as cover. Your reading sixth sense will directly assist you to pick up this book.

Dolly Taylor:

In this period of time globalization it is important to someone to get information. The information will make you to definitely understand the condition of the world. The condition of the world makes the information simpler to share. You can find a lot of sources to get information example: internet, classifieds, book, and soon. You can see that now, a lot of publisher this print many kinds of book. Often the book that recommended for you is Advances in Non-volatile Memory and Storage Technology (Woodhead Publishing Series in Electronic and Optical Materials) this reserve consist a lot of the information of the condition of this world now. That book was represented how does the world has grown up. The words styles that writer use to explain it is easy to understand. Often the writer made some study when he makes this book. That's why this book suitable all of you.

Raymond Nelson:

As a college student exactly feel bored in order to reading. If their teacher requested them to go to the library

or to make summary for some guide, they are complained. Just minor students that has reading's spirit or real their leisure activity. They just do what the instructor want, like asked to the library. They go to there but nothing reading seriously. Any students feel that reading through is not important, boring in addition to can't see colorful pics on there. Yeah, it is being complicated. Book is very important in your case. As we know that on this time, many ways to get whatever we want. Likewise word says, many ways to reach Chinese's country. So , this Advances in Non-volatile Memory and Storage Technology (Woodhead Publishing Series in Electronic and Optical Materials) can make you sense more interested to read.
