Nanomedicines and Nanoproducs: Applications, Disposition, and Toxicology in the Human Body provides a detailed overview of the disposition of nanoproducs within the body, with a special focus on the respiratory and olfactory routes of nanoproducs administration, buccal exposure and the ingestion of nanoproducs, the integumentary system (formed by the skin, hair, nails, and associated glands), the ocular route, the systemic route, and toxicology as it relates to the nanoscale world.

Offering an interdisciplinary, big-picture view of the current and future state of nanotechnology, this book:

- Identifies key points for the entry of nanoproducs, nanomedicines, and other nanoscale structures into the body
- Reviews the bodily administration and subsequent disposition of nanoproducs via various exposure routes
- Describes the intravenous route of administration for the therapeutic management of ocular disease
- Discusses practical nanoproducs and nanomedicine applications, disposition, and toxicology
- Summarizes various toxicological principles and the testing of nanoproducs

Nanomedicines and Nanoproducs: Applications, Disposition, and Toxicology in the Human Body addresses the scope of practical nanoparticle applications in academic research as well as industrial investigation, where "practical" is defined as advantageous in all aspects of nanoproducs disposition, efficacy, and toxicology. The book's goal is to introduce potentially beneficial applications and exciting topics regarding nanoproducs to a variety of professional and general readers.
