Modern Biophysical Chemistry: Detection and Analysis of Biomolecules Peter Jomo Walla

This updated and up-to-date version of the first edition continues with the really interesting stuff to spice up a standard biophysics and biophysical chemistry course. All relevant methods used in current cutting edge research including such recent developments as super-resolution microscopy and next-generation DNA sequencing techniques, as well as industrial applications, are explained. The text has been developed from a graduate course taught by the author for several years, and by presenting a mix of basic theory and real-life examples, he closes the gap between theory and experiment.

The first part, on basic biophysical chemistry, surveys fundamental and spectroscopic techniques as well as biomolecular properties that represent the modern standard and are also the basis for the more sophisticated technologies discussed later in the book. The second part covers the latest bioanalytical techniques such as the mentioned super-resolution and next generation sequencing methods, confocal fluorescence microscopy, light sheet microscopy, two-photon microscopy and ultrafast spectroscopy, single molecule optical, electrical and force measurements, fluorescence correlation spectroscopy, optical tweezers, quantum dots and DNA origami techniques. Both the text and illustrations have been prepared in a clear and accessible style, with extended and updated exercises (and their solutions) accompanying each chapter.

Readers with a basic understanding of biochemistry and/or biophysics will quickly gain an overview of cutting edge technology for the biophysical analysis of proteins, nucleic acids and other biomolecules and their interactions. Equally, any student contemplating a career in the chemical, pharmaceutical or bio-industry will greatly benefit from the technological knowledge presented. Questions of differing complexity testing the reader's understanding can be found at the end of each chapter with clearly described solutions available on the Wiley-VCH textbook homepage under: www.wiley-vch.de/textbooks

From reader reviews:

Tyler Smith:

Book is written, printed, or highlighted for everything. You can realize everything you want by a reserve. Book has a different type. We all know that that book is important thing to bring us around the world. Close to that you can your reading talent was fluently. A book Modern Biophysical Chemistry: Detection and Analysis of Biomolecules will make you to be smarter. You can feel considerably more confidence if you can know about everything. But some of you think that open or reading any book make you bored. It's not make you fun. Why they can be thought like that? Have you seeking best book or appropriate book with you?

Robert Carlson:

Book is to be different for every single grade. Book for children until finally adult are different content. As we know that book is very important usually. The book Modern Biophysical Chemistry: Detection and Analysis of Biomolecules seemed to be making you to know about other know-how and of course you can take more information. It is extremely advantages for you. The e-book Modern Biophysical Chemistry: Detection and Analysis of Biomolecules is not only giving you considerably more new information but also to get your friend when you sense bored. You can spend your current spend time to read your e-book. Try to make relationship while using book Modern Biophysical Chemistry: Detection and Analysis of Biomolecules. You never feel lose out for everything when you read some books.

William Johnson:

Reading can called head hangout, why? Because if you are reading a book specially book entitled Modern Biophysical Chemistry: Detection and Analysis of Biomolecules the mind will drift away trough every dimension, wandering in each aspect that maybe not known for but surely will end up your mind friends. Imaging each word written in a publication then become one form conclusion and explanation that will maybe you never get just before. The Modern Biophysical Chemistry: Detection and Analysis of Biomolecules giving you one more experience more than blown away the mind but also giving you useful data for your better life with this era. So now let us demonstrate the relaxing pattern at this point is your body and mind will probably be pleased when you are finished studying it, like winning an activity. Do you want to try this extraordinary investing spare time activity?

Shirley Vega:

Book is one of source of understanding. We can add our information from it. Not only for students but also native or citizen need book to know the update information of year to help year. As we know those publications have many advantages. Beside we all add our knowledge, can bring us to around the world. With the book Modern Biophysical Chemistry: Detection and Analysis of Biomolecules we can have more advantage. Don't someone to be creative people? To be creative person must like to read a book. Just choose

the best book that acceptable with your aim. Don't become doubt to change your life at this time book
Modern Biophysical Chemistry: Detection and Analysis of Biomolecules. You can more pleasing than now.
