GnRH: The Master Molecule of Reproduction Andrea C. Gore

Gonadotropin-releasing hormone (GnRH) cells are the key regulators of reproductive function in all vertebrate organisms. The GnRH molecule is synthesized in a small number of neurons in rostral hypothalamic regions of the brain. In mammals, these neurons release the GnRH decapeptide into the portal capillary system leading to the anterior pituitary gland. There, GnRH causes the release of the gonadotropins, luteinizing hormone (LH) and follicle-stimulating hormone (FSH), which in turn act upon the gonads to stimulate their maturation, and to cause synthesis of sex steroid hormones, estrogen, progesterone and testosterone. Although each of the levels of the hypothalamic-pituitary-gonadal axis is critical for reproductive function, GnRH neurons play the primary role in the control of reproductive maturation and adult reproductive function, and may even play a role in reproductive senescence.

Since its discovery in 1970, there has been intense interest in GnRH-producing neurons, with more than 8000 papers and chapters in the last decade alone. Despite this activity of research in basic and clinical science, there has never been a book written specifically on GnRH neurons. **GnRH: The Master Molecule of Reproduction** aims to bring together the large and diverse literature of both laboratory and applied research that focuses on these unique cells.

This book will provide basic background into reproductive neuroendocrinology, as well as specifics regarding the role of GnRH neurons in the control of reproduction. Students studying endocrinology, reproduction, neuroendocrinology or molecular endocrinology will benefit from this book. In addition, this book will take a multi-species approach which will be useful both to basic researchers as well as clinicians. Whenever possible, species differences and similarities will be presented, and if possible, studies on humans, or the clinical relevance of basic research findings to humans will be discussed (such as the treatment of reproductive disorders such as abnormalities in pubertal development, or infertility).

From reader reviews:

Lois Silvey:

A lot of people always spent their free time to vacation as well as go to the outside with them loved ones or their friend. Do you realize? Many a lot of people spent they free time just watching TV, or even playing video games all day long. If you would like try to find a new activity honestly, that is look different you can read the book. It is really fun for you. If you enjoy the book that you read you can spent all day long to reading a reserve. The book GnRH: The Master Molecule of Reproduction it is extremely good to read. There are a lot of people that recommended this book. We were holding enjoying reading this book. Should you did not have enough space to create this book you can buy the particular e-book. You can m0ore simply to read this book out of your smart phone. The price is not very costly but this book offers high quality.

Mary Buss:

Exactly why? Because this GnRH: The Master Molecule of Reproduction is an unordinary book that the inside of the reserve waiting for you to snap the item but latter it will jolt you with the secret the item inside. Reading this book next to it was fantastic author who also write the book in such amazing way makes the content within easier to understand, entertaining way but still convey the meaning completely. So , it is good for you because of not hesitating having this ever again or you going to regret it. This book will give you a lot of positive aspects than the other book include such as help improving your skill and your critical thinking method. So , still want to hold off having that book? If I were you I will go to the publication store hurriedly.

John Jones:

In this age globalization it is important to someone to get information. The information will make a professional understand the condition of the world. The health of the world makes the information quicker to share. You can find a lot of sources to get information example: internet, magazine, book, and soon. You can see that now, a lot of publisher this print many kinds of book. Often the book that recommended to your account is GnRH: The Master Molecule of Reproduction this e-book consist a lot of the information from the condition of this world now. This book was represented how can the world has grown up. The dialect styles that writer value to explain it is easy to understand. The writer made some investigation when he makes this book. That is why this book appropriate all of you.

Diana Erickson:

As a scholar exactly feel bored for you to reading. If their teacher asked them to go to the library as well as to make summary for some book, they are complained. Just tiny students that has reading's spirit or real their passion. They just do what the trainer want, like asked to go to the library. They go to at this time there but nothing reading critically. Any students feel that examining is not important, boring in addition to can't see colorful photos on there. Yeah, it is for being complicated. Book is very important for you personally. As we know that on this time, many ways to get whatever we want. Likewise word says, ways to reach Chinese's

country. Therefore , this GnRH: The Master Molecule of Reproduction can make you truly feel more interested to read.
