Peatland Biogeochemistry and Watershed Hydrology at the Marcell Experimental Forest

Peatland Biogeochemistry and Watershed Hydrology at the Marcell Experimental Forest

The Marcell Experimental Forest (MEF) in Minnesota serves as a living laboratory and provides scientists with a fundamental understanding of peatland hydrology, acid rain impacts, nutrient and carbon cycling, trace gas emissions, and controls on mercury transport in boreal watersheds. Its important role in scientific research continues to grow as the data gathered offers invaluable insight into environmental changes over the last century and goes far in answering many of today's pressing questions at landscape and global scales.

Synthesizing five decades of research, **Peatland Biogeochemistry and Watershed Hydrology at the Marcell Experimental Forest** includes hundreds of research publications, dozens of graduate theses, and even some previously unpublished studies. Research at the MEF has been at the forefront of many scientific disciplines and these 15 chapters offer the depth and breadth of long-term studies on hydrology, biogeochemistry, ecology, and forest management on peatland watersheds at the MEF.

Focusing on peatlands, lakes, and upland landscapes, the book begins with the pioneering research on hydrology done during the 1960s. It presents the innovative 1970's studies of atmospheric deposition; the 1980's research into nutrient cycles including carbon, nitrogen, and methane emissions; and the 1990's investigations into mercury deposition. The book concludes with a look at the latest and on-going studies such as this century's research into controls on methylmercury production and landscape-level carbon storage and cycling.

Covering 50 years of research and written by a veritable who's who in peatland and forestry science, this important milestone in the collection of ecological data highlights bright prospects for future research, including the continuation of existing long-term measurements, the initiation of new monitoring programs, and plans for unprecedented studies on climate change.

From reader reviews:

Johanna Hernandez:

What do you concerning book? It is not important along with you? Or just adding material when you want something to explain what the ones you have problem? How about your free time? Or are you busy person? If you don't have spare time to do others business, it is give you a sense of feeling bored faster. And you have time? What did you do? Everybody has many questions above. They must answer that question mainly because just their can do in which. It said that about guide. Book is familiar in each person. Yes, it is correct. Because start from on guardería until university need that Peatland Biogeochemistry and Watershed Hydrology at the Marcell Experimental Forest to read.

Jennifer Joseph:

As we know that book is vital thing to add our know-how for everything. By a reserve we can know everything you want. A book is a pair of written, printed, illustrated or even blank sheet. Every year had been exactly added. This book Peatland Biogeochemistry and Watershed Hydrology at the Marcell Experimental Forest was filled about science. Spend your free time to add your knowledge about your science competence. Some people has various feel when they reading the book. If you know how big benefit from a book, you can really feel enjoy to read a guide. In the modern era like at this point, many ways to get book you wanted.

Christina Pena:

That book can make you to feel relax. This book Peatland Biogeochemistry and Watershed Hydrology at the Marcell Experimental Forest was bright colored and of course has pictures on the website. As we know that book Peatland Biogeochemistry and Watershed Hydrology at the Marcell Experimental Forest has many kinds or type. Start from kids until young adults. For example Naruto or Private investigator Conan you can read and think that you are the character on there. So , not at all of book usually are make you bored, any it can make you feel happy, fun and loosen up. Try to choose the best book to suit your needs and try to like reading this.

Gigi Brown:

A lot of guide has printed but it differs. You can get it by internet on social media. You can choose the most beneficial book for you, science, comic, novel, or whatever through searching from it. It is named of book Peatland Biogeochemistry and Watershed Hydrology at the Marcell Experimental Forest. You can include your knowledge by it. Without leaving the printed book, it might add your knowledge and make an individual happier to read. It is most essential that, you must aware about e-book. It can bring you from one place to other place.
