A Compendium of Partial Differential Equation Models: Method of Lines Analysis with Matlab

William E. Schiesser, Graham W. Griffiths

A Compendium of Partial Differential Equation Models presents numerical methods and associated computer codes in Matlab for the solution of a spectrum of models expressed as partial differential equations (PDEs), one of the mostly widely used forms of mathematics in science and engineering. The authors focus on the method of lines (MOL), a well-established numerical procedure for all major classes of PDEs in which the boundary value partial derivatives are approximated algebraically by finite differences. This reduces the PDEs to ordinary differential equations (ODEs) and thus makes the computer code easy to understand, implement, and modify. Also, the ODEs (via MOL) can be combined with any other ODEs that are part of the model (so that MOL naturally accommodates ODE/PDE models). This book uniquely includes a detailed line-by-line discussion of computer code as related to the associated equations of the PDE model.

From reader reviews:

Linda Musselwhite:

Hey guys, do you want to find a new book to study? Maybe the book with the title A Compendium of Partial Differential Equation Models: Method of Lines Analysis with Matlab suitable to you? The particular book was written by well-known writer in this era. The particular book entitled A Compendium of Partial Differential Equation Models: Method of Lines Analysis with Matlab is one of several books in which everyone reads now. This kind of book has inspired a lot of people in the world. When you read this publication you will enter the new dimension that you never knew prior to. The author explained their thought in the simple way, and so all of people can easily recognize the core of this reserve. This book will give you a large amount of information about this world now. So you can see the representation of the world with this book.

Maria Ives:

The actual book A Compendium of Partial Differential Equation Models: Method of Lines Analysis with Matlab has a lot of information on it. So when you check out this book you can get a lot of gain. The book was authored by the very famous author. This author makes some research previous to write this book. That book very easy to read you can get the point easily after reading this article book.

Brain West:

In this era globalization it is important to someone to receive information. The information will make professionals understand the condition of the world. The condition of the world makes the information better to share. You can find a lot of recommendations to get information example: internet, newspapers, book, and soon. You can see that now, a lot of publisher in which print many kinds of book. Often the book that recommended for you is A Compendium of Partial Differential Equation Models: Method of Lines Analysis with Matlab this reserve consist a lot of the information from the condition of this world now. That book was represented how the world has grown up. The vocabulary styles that writer make usage of to explain it is easy to understand. The actual writer made some study when he makes this book. This is why this book acceptable all of you.

Sandra Lester:

Reading a reserve make you to get more knowledge from the jawhorse. You can take knowledge and information coming from a book. Book is composed or printed or illustrated from each source this filled update of news. Within this modern era like currently, many ways to get information are available for a person. From media social including newspaper, magazines, science publication, encyclopedia, reference book, fresh and comic. You can add your understanding by that book. Isn't it time to spend your spare time to open your book? Or just searching for the A Compendium of Partial Differential Equation Models: Method of Lines Analysis with Matlab when you necessary it?
